

Creating a digital system

Description: Students find a digital system to explore. Then they create a model of the system using recyclable materials. They use their model to role-play at home.

30–60 MIN

EASY

AGES 5–8

ACTIVITY TYPE: MODEL BUILDING

Image source: [pixabay](https://pixabay.com)

You will need ...

- Digital system (eg computer)
- Paper
- Craft tools (eg scissors, sticky tape, glue)
- Recyclable materials
- Imagination

Image source: [pixabay](https://pixabay.com/)

About the activity

Find digital systems in your home.

Most will have an operating system and different components, such as input, output and communication.

After discovering a digital system of interest, create a model of the chosen device that can be used during role-play situations at home.

Let's get started

1

Find and examine a digital system in your home (eg, a computer).

Tip: If you don't have a digital system in your own home, there should be one at your local library.

What's next?

2

Discuss the different components of the digital system (eg mouse, keyboard, monitor, etc) and what each of the elements does.

Tip: If you are unsure, look at the [Australian Curriculum definition](#) of a digital system.

What's next?

3

- Create a hand-drawn plan of the model you are going to make.
- Discuss the types of materials you could use to make each of the components.

Tip: Ask your child to label the components of the system in the plan.
(They may need your guidance to do this.)

What's next?

4

Collect recyclable materials to create your digital system model.

Tip: If you are missing a part, head to a shop to see if they have any spare packaging boxes.

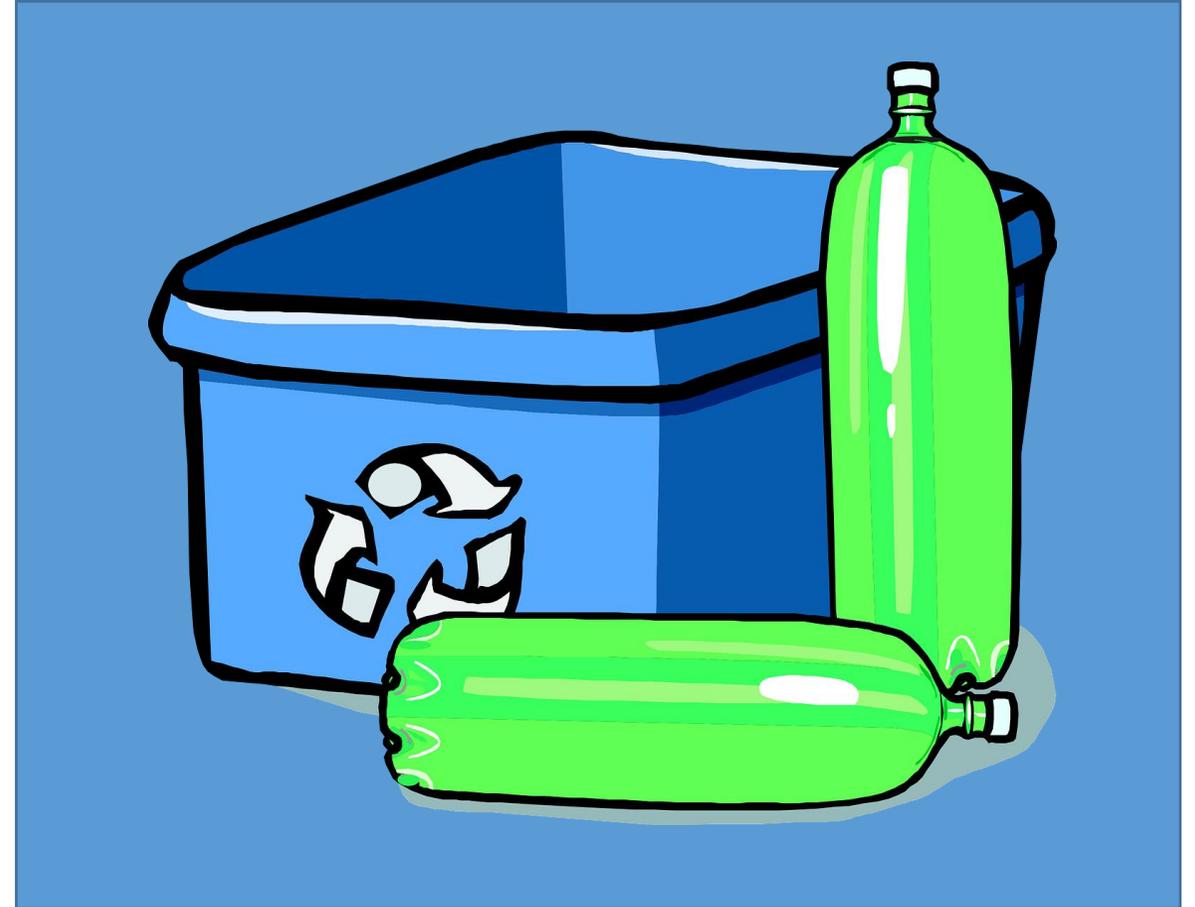

Image source: [pixabay](#)

What's next?

5

Using the plan to guide you, construct your digital system model with the recyclable materials.

Tip: Have glue, sticky tape, string, pens, scissors, etc available for construction.

Image source: [pixabay](https://pixabay.com)

Congratulations!

6

- Your digital system is now complete.
- Spend some time incorporating this model into a role-play situation.
- Try to encourage the use of language during play, eg *This keyboard provides an input into the computer.*

Why we are learning about this

The term *digital system* refers to elements such as hardware, software, networks and their use. There may be many different components in one system; for example, a computer has a central processing unit, a hard disk, keyboard, mouse, screen etc. A peripheral device is a digital component that can be connected to a digital system; for example, a digital camera or printer.

It is important for students to understand what a digital system is, the different components that make up the system, and how each of the elements works together.

To find out more, go to [Sequencing the Curriculum](#) on the Digital Technologies Hub.
