Discovering **Artificial Intelligence (AI)**

AI and conventional programming

**DIGITAL
TECHNOLOGIES
HUB**

Acknowledgement of Country

ESA acknowledges the Eastern Kulin Nation, Traditional Custodians of the land on which our head office stands, and pays our respects to Elders past and present.

We recognise the Traditional Custodians of Country across Australia and their continuing connection and contribution to lands, waters, communities and learning

By the end of this session

Guide students in how machine learning differs from traditional code, especially in terms of **input data**.

Observe / try a hands-on example of writing a conventional program and adding **AI decisions** to it.

Look at **assessment** and **coding pedagogies**, as well as considerations around **IP** and **privacy**.

Achievement standards:

Achievement Standard

By the end of Year 6, students explain digital system components (hardware and how digital systems are connected) and how digital systems use data to represent a variety of data types.

Students define problems in terms of requirements and design solutions to address the problems. They incorporate repetition and user interface design to implement their digital solutions, and explain how information systems meet needs and consider sustainability in the creation and communication of ideas. They collaborate on digital projects using protocols.

Achievement Standard

By the end of Year 8, students distinguish types of networks and defined purposes. They explain how image and audio data can be represented in digital systems.

Students plan and manage digital projects to meet information needs. They define and decompose complex problems in terms of functional requirements and constraints. They design and implement modular programs, including an object-oriented program, using algorithms and data structures involving modular functions that reflect the relationships of real-world data and data entities. They take account of privacy and security requirements when selecting and validating data. Students test and predict results and implement digital solutions. They evaluate information systems and their solutions in terms of risk, sustainability and potential for innovation and enterprise. They share and collaborate online, establishing protocols for the use, transmission and maintenance of data and projects.

Achievement Standard

By the end of Year 10, students explain the control and management of networked digital systems and the security implications of the interaction between hardware, software and users. They explain simple data compression, and why content data are separated from presentation.

Students plan and manage digital projects using an iterative approach. They define and decompose complex problems in terms of functional and non-functional requirements. Students design and evaluate user experiences and algorithms. They design and implement modular programs, including an object-oriented program, using algorithms and data structures involving modular functions that reflect the relationships of real-world data and data entities. They take account of privacy and security requirements when selecting and validating data. Students test and predict results and implement digital solutions. They evaluate information systems and their solutions in terms of risk, sustainability and potential for innovation and enterprise. They share and collaborate online, establishing protocols for the use, transmission and maintenance of data and projects.

EXPLAINER VIDEO: Introduction to AI and machine learning

Traditional programming

Machine learning: training

Do this with 100s of known shark images...

Machine learning: training

Do this with 100s of known dolphin images...

Machine learning: testing

What do you notice about the input data...

...in traditional programming?

- discrete, quantifiable

...with machine learning?

- text, sound, image, sensory
- often very large amounts of data

What's so special about AI?

Like us, AIs are able to fill in knowledge gaps.

They can draw on similarities. Let's do a **demonstration**.

RESOURCE: Simulation at [My Computer Brain](#)

LESSON: [Home automation with AI](#) (Years 5-8)

Considerations when teaching to the curriculum

What does Artificial
Intelligence add?

When and how to combine
AI and conventional
programming?

Conventional Programming

Algorithms

- opportunities to design, trace and test

Implementation

- General Purpose programs involving branching, iteration, functions, data structures

Artificial Intelligence

Data Representation

- text, image and audio in binary

Data Collection, Data Interpretation

Impact

Our hands-on example

A **simple 1-question quiz**.

User can answer by pressing **y** or **n** on the keyboard.

Then, upgrade user interface so the user can answer with **thumbs-up** or **thumbs-down** on webcam.

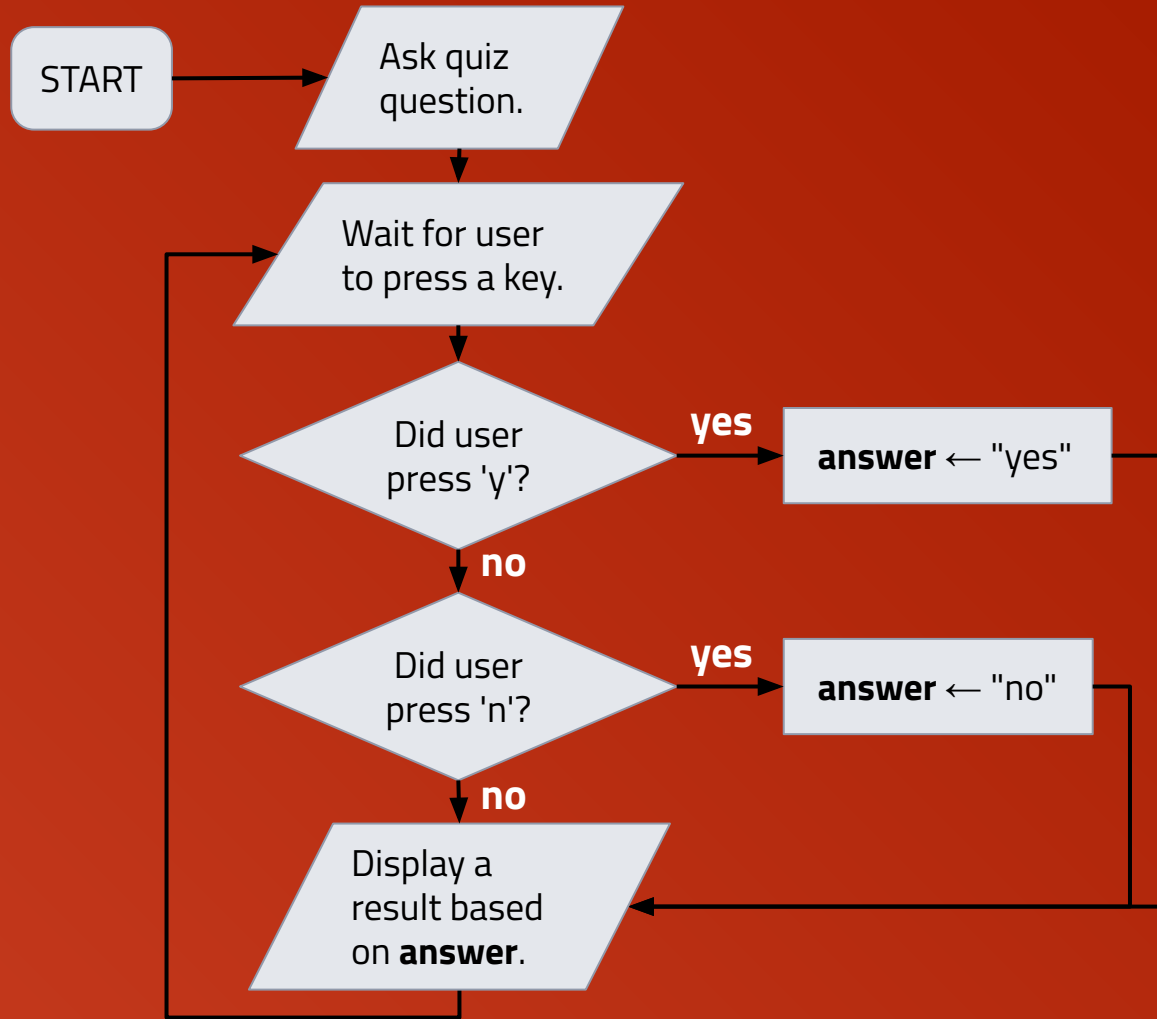

Our hands-on example

1. Design and code a **conventional program**.
(P5 JavaScript environment)
2. Prepare an **AI model** for recognising thumb gestures.
(Teachable Machine)
3. Bring the trained model into our program.

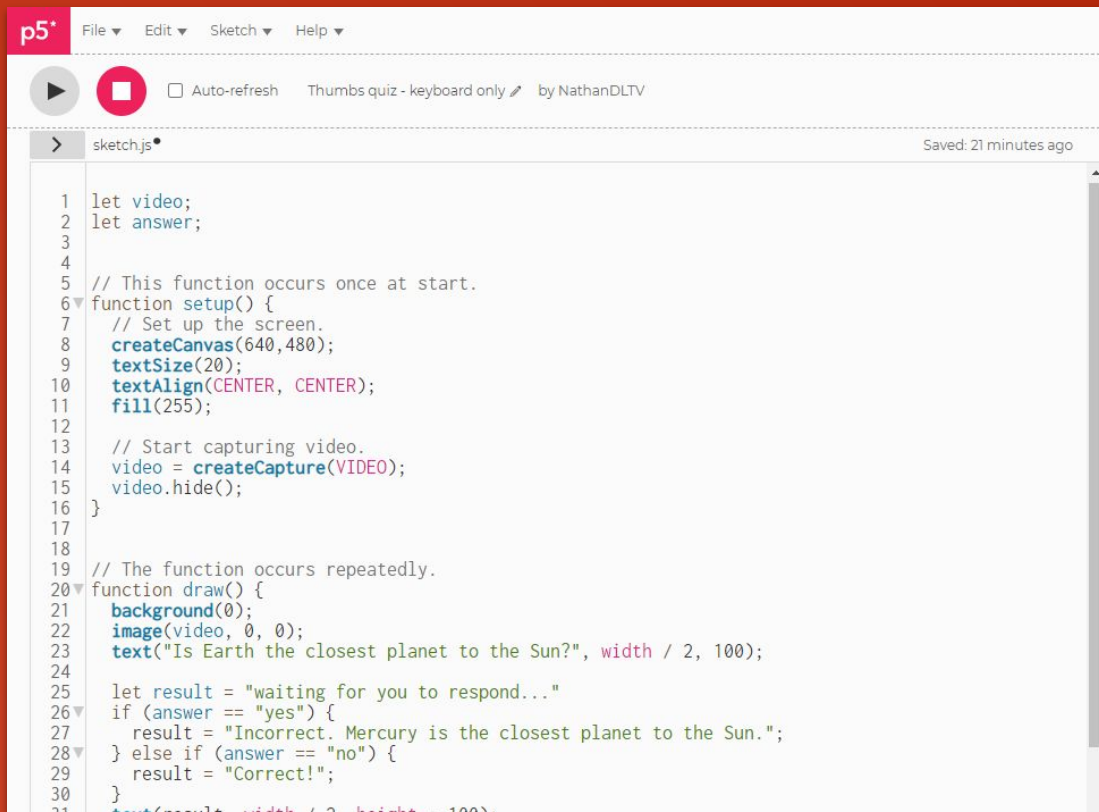

1. Design a conventional program

1. Design a conventional program

1. Code our conventional program

The screenshot shows the p5.js IDE interface. At the top, there's a menu bar with 'File', 'Edit', 'Sketch', and 'Help'. Below it, a toolbar contains a play button, a stop button, and a checkbox for 'Auto-refresh'. The main area displays a JavaScript sketch named 'sketch.js'. The code defines a 'setup' function and a 'draw' function. The 'setup' function initializes a canvas, sets text size and alignment, and starts video capture. The 'draw' function displays a quiz question: 'Is Earth the closest planet to the Sun?'. It checks for 'yes' or 'no' answers and provides feedback: 'Incorrect. Mercury is the closest planet to the Sun.' for 'yes' and 'Correct!' for 'no'. The video is hidden after capture.

```
1 let video;
2 let answer;
3
4
5 // This function occurs once at start.
6 function setup() {
7   // Set up the screen.
8   createCanvas(640,480);
9   textSize(20);
10  textAlign(CENTER, CENTER);
11  fill(255);
12
13  // Start capturing video.
14  video = createCapture(VIDEO);
15  video.hide();
16 }
17
18
19 // The function occurs repeatedly.
20 function draw() {
21   background(0);
22   image(video, 0, 0);
23   text("Is Earth the closest planet to the Sun?", width / 2, 100);
24
25   let result = "waiting for you to respond..."
26   if (answer == "yes") {
27     result = "Incorrect. Mercury is the closest planet to the Sun.";
28   } else if (answer == "no") {
29     result = "Correct!";
30   }
31   text(result, width / 2, height - 100);
```

We're using the **p5 environment** for JavaScript coding.

- **Starting point**
- **Finished program (keyboard input only)**

2. Prepare an AI model: consider data

How can we represent **Y** and **N** clearly?

We need **multiple photos** and different **angles / directions**.

What about background?

2. Prepare an AI model: train the AI

1. Collect data.

The screenshot displays the Google Teachable Machine interface. On the left, there are two data collection panels. The top panel, titled 'Thumbs up', shows '42 Image Samples' and includes 'Webcam' and 'Upload' buttons, followed by a row of seven thumbs-up icons. The bottom panel, titled 'Thumbs down', shows '38 Image Samples' and includes similar buttons followed by a row of seven thumbs-down icons. A black arrow points from the text '1. Collect data.' to the 'Thumbs up' panel. A dashed line connects the thumbs-up icons to the 'Training' panel. The 'Training' panel has a 'Train Model' button and an 'Advanced' dropdown menu. A solid line connects the 'Train Model' button to the 'Preview' panel. The 'Preview' panel has an 'Export Model' button and a message: 'You must train a model on the left before you can preview it here.'

Google Teachable Machine

2. Prepare an AI model: train the AI

1. Collect data.

2. Train the AI model.

- Final program with gesture recognition

Relevant lesson ideas

Rock, Paper, Scissors, AI!

Similar to the hands-on example we just did. Train an AI model and demonstrate adding it to a program.

Expand on this lesson to have the computer play Rock, Paper, Scissors with you!

Home automation: General Purpose programming

Use JavaScript in the Pencil Code environment to incorporate speech recognition in a program.

Also can be done in Python (with limitations).

LESSON: Rock, Paper, Scissors, AI! (Years 7-8)

LESSON: Home automation: General Purpose programming (Years 7-8)

Pedagogy, property and privacy

Coding brings its own pedagogical challenges.

Remixing is a chance to discuss intellectual property.

AI involving images and voices also bring privacy considerations.

Remixing

In each programming lesson, sample code is provided.

Isn't that just giving students the answer?

This is an **evidenced-based approach**, and reflective of **real world** programming.

Image: [United Kingdom Department of Education](#)

PRIMM is one approach that can help teachers structure lessons in programming.

From blog post: [Exploring pedagogies for teaching programming in school](#)

A learner runs (**uses**) an existing program to see what it does, then **modifies** it, and then when able, **creates** a new project of their own.

Let's apply remixing

What could students do to tinker with the quiz program we just made?

What fresh projects could be inspired?

- add a third gesture ("not sure")
- multiple choice quiz and use AUSLAN letters **A**, **B**, **C** or **D** to answer
- three quiz questions and give a score
- a timed game: choose the right gesture quickly

Also an opportunity to discuss **intellectual property**, part of ICT General Capability.

In the real world programmers often **adapt** others' work. Where is the line between adapting and simply copying?

Privacy

Students photographing their own face or recording their own voice is a privacy concern.

What alternatives could you do for your coding activities?

- emojis
- toys
- fruit / vegetables
- semaphore and poses
- sign language**

E-safety: risk assessment

Effectively plan and assess risks and benefits before introducing any new online platforms or technologies.

New technologies risk-assessment tool

eSafety Toolkit for Schools

Creating safer online environments

This risk-assessment tool can help schools to effectively plan and assess risks and benefits before introducing any new online platforms or technologies. Additional research about the platform/technology is recommended if you are unsure of the answer to one or more of the questions.

For technical questions, ask for guidance from an appropriately qualified advisor, member association or technology support staff. You might also check with staff who have already adopted the technology. Once your school has decided on the technology or platform it wishes to use, staff will need to be shown how to use the technology, and how to integrate its use into the curriculum. Staged implementation may help to avoid unintended or unexpected consequences of student use. Usage should be consistent with, and informed by, education department or sector policies and procedures.

New technologies risk-assessment tool

E-safety: risk assessment

 Risk identified: take appropriate action to mitigate risks before using

 Proceed with caution: continue to monitor for risks

| Consider | Yes | No | Suggestions to mitigate risks |
|---|--------------------------|--------------------------|--|
| Will students' personal information be publicly displayed (e.g. photograph, date of birth, gender or name of school)? | ☐ | ☐ | <ul style="list-style-type: none">Obtain consent from students and their parents/carers before displaying personal information online.Where possible, de-identify student information. |
| Can external, unauthorised users communicate with students? | ☐ | ☐ | <ul style="list-style-type: none">Install appropriate technologies to monitor and filter activities on school ICT systems.Teach students strategies to report external, unauthorised communication and block inappropriate content or contact. |
| Does the platform encourage students to use their existing email or social networking accounts for sign in or use? | ☐ | ☐ | <ul style="list-style-type: none">Often platforms also have the option to sign up or log in using unique usernames and passwords. While using existing social networking accounts might be quicker, unique logins are a safer option.Teach students the importance of strong passwords and not sharing passwords. |
| Are student profiles linked to apps that can display their location? | ☐ | ☐ | <ul style="list-style-type: none">Teach students strategies to turn off location services functions, or to block apps that have these turned on. |
| Does the education department prohibit the use of this technology or platform? | ☐ | ☐ | <ul style="list-style-type: none">If the education department's policies prohibit the use of this technology or platform it is recommended not to use it. |
| Can students access inappropriate content using this technology or platform? | ☐ | ☐ | <ul style="list-style-type: none">Install appropriate technologies to monitor and filter activities on school ICT systems.Encourage help-seeking behaviours so students know the steps to take if they come across inappropriate content. |

E-safety: risk assessment

| Consider | Yes | No | Suggestions to mitigate risks |
|---|--------------------------|--------------------------|--|
| Have minimum age requirements for the technology or platform been adhered to? | ☐ | ☐ | <ul style="list-style-type: none">• Check age appropriateness prior to use.• Teach students about age recommendations and the reasons behind them. |
| Does the platform promote privacy and security for students and their accounts? | ☐ | ☐ | <ul style="list-style-type: none">• Empower students to protect their privacy and explain how to adjust security settings. |
| Have parents/carers consented to their child using this technology or platform? | ☐ | ☐ | <ul style="list-style-type: none">• Ensure appropriate consent has been provided by parents/carers. Some schools request consent to use a broad range of platforms at the start of the school year to avoid having to ask for consent each time a new platform is used. It's important to be as clear as possible about what this consent includes, as well as providing information on any possible risks to users and how the school mitigates them. |
| Are staff comfortable and confident using the platform? | ☐ | ☐ | <ul style="list-style-type: none">• Provide access to professional learning so staff are skilled in the platforms/technologies they use. |
| Is there a staff member moderator for chat or comment functions? | ☐ | ☐ | <ul style="list-style-type: none">• A staff member (or team) would ideally be appointed to moderate chat or comment functions, to encourage safe and positive interactions and to take down and investigate inappropriate posts. |
| Does the platform have capacity to report problems or misuse? | ☐ | ☐ | <ul style="list-style-type: none">• All platforms should have terms of use that clearly identify inappropriate content or behaviour, and how to report problems or misuse.• Visit The eSafety Guide for more information. |
| Do all users know how to set the platforms' privacy settings? | ☐ | ☐ | <ul style="list-style-type: none">• Share The eSafety Guide with staff. This has links to the latest games, apps and social media, with tips on how to set privacy settings. |
| Have you identified how data is stored and used by the platform? | ☐ | ☐ | <ul style="list-style-type: none">• Privacy issues arise when data is collected and not stored securely or shared inappropriately. Good practice is to find out how data will be stored and who has access.• Check education department or sector policies to see if there are any standard protocols schools should follow, as well as advice about privacy legislation and data storage. |

Assessment

Artificial Intelligence is a rich field for assessment opportunities.

Here are a few examples in the core concept areas of data, algorithms, implementation and impact.

Data representation, Impact

Train and test an AI model

- Rate how well the AI recognised objects.
- Discuss the training data used.
- List ways it may be improved.

Research Algorithmic Bias

- Discuss real-world examples of algorithmic bias.
- Consider social impact.

Data representation, Algorithms, Implementation

Utilise a trained AI model in a coded program

- Design and develop a program in a suitable environment such as **p5** JavaScript.
- Import the AI model and use it to drive the program's decisions.
- Assess General Purpose Programming with a suitable rubric.

Students' use of apps & tools

Think Aloud: Student interview

- Screen captures or saved program

Self-reflection

- What they learned, challenges, checklist/rating their skills before/after

Analysis

- Artefacts such as worksheets or analysis of AI tools, applications and real world uses.
- Criteria used

Artificial Intelligence lesson plans

Humans display natural intelligence in contrast to machines that demonstrate artificial intelligence (AI).

AI has various definitions however for our purposes we are using the definition 'any device that perceives its environment and takes actions that maximize its chance of successfully achieving its goals' [1]. [Read more...](#)

The following lesson ideas cover a range of specialisations and subsets as indicated by the colour coding. Click on the coloured squares to learn more about each definition.
