Ethical considerations: Flowchart B

What is the ethical issue associated with the AI application?

Who (or what, such as the environment) is affected by the AI application and why?

Consider how important this AI application is to them.

What criteria will be used to evaluate the consequences of the AI application?

For example, early diagnosis of skin cancer through the use of an AI application increases the health and wellbeing of Australians.

On the basis of the criteria, what are some of the benefits (or positive consequences) of the AI application and for whom?

On the basis of the criteria, what are some harmful or negative effects and risks from this application? Who is being affected?

For example, what might go wrong, and for whom? What are some of the risks, such as potential breaches in security of privacy or personal information

Who is responsible if something goes wrong with the application?

Is there a duty of care?

Rank what you think are the *three* most important consequences of this AI application (positive and/or negative).
